## KEY FEATURES / HIGHLIGHTS

- **Effective tent floor elevations** - The integrated tent floor system design allows for safe and efficient elevation of clear span structures.
- **Labor savings** - The precise engineering reduces labor in set-up, teardown, and logistics.
- **Fits the tent** - The metric flooring panels create a seamless integration between the tent and floor. The tent base plates are incorporated into the tent floor system. No additional layout, drilling, or shoring required.
- **Minimal components** - fewer components and minimal tools allow for faster setup and teardown.
- **Versatile** - various heights, quick attach accessories, tiered beams, and more help ensure maximum ROI.
- **Understructure** - basic system scaffold understructure is easy to find for purchase or rent.

“Code load and structural requirements are moving to require an engineered system treating tent and platform as one structure. Investing in an engineered system already designed to account for these requirements is the smart choice now and for the future.”

- **Tom Markel**  
**Bravo Event Rentals**

# ENGINEERED TENT FLOOR SYSTEM

System scaffold provides a stable understructure that is quick and easy to assemble

The TF2100 floor panel is designed specifically for elevated tent floors with high grade aluminum and plywood to ensure load capacities.

Engineered components that integrate the floor to the structure. The TF2100 system meets necessary codes and PE certifications.

Customized base plates engineered to fit your tent. Multiple attach points to secure to the system.
